

AMENDMENT

In the Claims

The following Listing of Claims, in which deleted text appears ~~struck through~~ and inserted text appears underlined, will replace all prior versions, and listings, of claims in the application.

LISTING OF CLAIMS:

1. (Currently Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a browser of a client computer system, comprising:

receiving, at an auxiliary server, a request from a client browser for a main program in response to ~~[[after]]~~ the client browser ~~[[has obtained]]~~obtaining an item document of a particular seller from an auction site and the browser displaying a particular portion of said item document; and

delivering the main program to the requesting client browser, the main program being configured to receive, from the client browser, information ~~[[sufficient]]~~to select the particular seller, and to load and activate one or more modules including a picture displaying module for displaying selectable images, the picture displaying module being configured to obtain a set of selectable images of the selected seller's auction items based on the received ~~[[seller specific]]~~ information that selects the particular seller, to moveably display in the item document~~[[,]]~~ on the client browser, a set of selectable images, showing the selected seller's auction items, and to receive a user selection of a selectable image being displayed and to redirect the client browser to an auction item document at an auction site associated with the selected image; and

sending the set of selectable images, based on the received ~~[[seller specific]]~~information that selects the particular seller, to the browser.

2. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1, wherein the step of receiving a request from a client browser for a main program includes receiving the request from an auction item document obtained from an auction site.

3. (Canceled)

4. (Previously Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1,

wherein the picture displaying module is configured to moveably display the set of selectable images at a controllable speed; and

wherein the controllable speed is controlled by a current position of a pointing device connected to the client computer system.

5. (Previously Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1,

wherein the client computer system includes a display output device and the client browser occupies a graphical window on display output device; and

wherein the picture displaying module is configured to moveably display the set of selectable images horizontally in the client browser graphical window.

6. (Previously Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1, wherein the main program is configured to load and activate a categories module that maintains a set of categories available on the auction site from the specified seller, said categories module initially obtaining the set of categories of the specified seller from the auction site and thereafter obtaining the set of categories from the auxiliary server.

7. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 6, wherein the set of categories available on the auction site from the specified seller is stored on the auxiliary server.

8. (Previously presented) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 6, wherein the main program is configured to load and activate an item links module that maintains a set of item links for each category in the set of categories available on the auction site from the specified seller.

9. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 8, wherein the set of item links available on the auction site from the specified seller is stored on the auxiliary server.

10. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 9, wherein the set of item links includes an item name associated with each item link.
